Summary

Full-Stack Software Engineer and recent Master's graduate in Computer Science, experienced in building backend systems, APIs, and end-to-end applications. Skilled in designing and developing features, collaborating with teams, and delivering reliable production-ready solutions across the software lifecycle.

Technical Skills

- **Programming & Backend:** Python, Node.js, Java, TypeScript, SQL
- **Frameworks & ML:** NestJS, Flask, Django, PyTorch, TensorFlow, Scikit-learn
- **Databases & Data:** PostgreSQL, MySQL, MongoDB, ETL pipelines
- **Cloud & DevOps:** AWS (EC2, S3, Lambda), Azure, Docker, GitHub Actions, CI/CD
- **Monitoring & Testing:** Prometheus, Grafana, Postman, Jest
- **Collaboration & Workflow:** GitHub, Jira, Confluence, Agile/Scrum

Education

Master's (Computer Science) - University of Windsor, Canada Jan 2024 – Jun 2025

Bachelor's (Computer Science Engineering) – Karunya University, India Jul 2016 – Aug 2020

Professional Experience

Software Engineer Sep 2025 – Present

Plato Agentic Systems – Canada

- Designed reinforcement learning environments for artificial intelligence agents, enabling task automation, environment orchestration, and synthetic data generation.
- Built frameworks to facilitate agent-system interaction, analyze dependencies, and generate actionable insights from complex environments.

Full-Stack Developer Intern Jan 2025 – Aug 2025

Semper8 Capital Ltd. – Canada

- Worked with the portfolio management team to develop data pipelines and APIs delivering cleaned financial data to interactive React dashboards.
- Developed backend services for a WebRTC platform using NestJS and MongoDB, including a custom signaling server, VideoSDK integration, and secure JWT-based authentication.

Application Development Analyst Jan 2021 – Aug 2023

Accenture – India

- Developed and automated backend workflows using Python to improve efficiency, reliability, and maintainability across ERP and enterprise systems.
- Built and optimized internal tools for user provisioning, role lifecycle management, data validation, and compliance, reducing manual effort and enhancing security.
- Collaborated with cross-functional global teams in Agile sprints to deliver secure, scalable software and enable knowledge transfer.

Key Project

Fence Repair Business Automation – Canada Sep 2024 – Dec 2024

- Developed AI-powered automation workflows integrating SaaS platforms (Airtable, QuickBooks, Calendly) with Python APIs, while building analytics pipelines that reduced manual processing.
- Implemented scalable backend services and CI/CD pipelines with GitHub Actions to deploy machine learning models and APIs reliably in production.
